

## HORNED BLADDERWORT

*Utricularia cornuta*

Located on wet peaty, sandy or muddy shores and in bogs throughout the Division. This genus of plant traps minute organisms in small bladders on submerged branches.

Herbs with creeping underground stems bearing simple, filament-like leaves with minute traps on margins. Flowering stem straight and erect, wiry, slender and brownish; 3 to 35 cm high. One to 5 yellow, 2 lipped, fragrant flowers on the top of the stem; 1.5 to 2.5 cm long overall, lower lip larger than upper, helmet-shaped; a long, downward and outward turned spur arises from the base of the lower lip, 0.7 to 1.2 cm long; blooming from June to September.
